LUCA ANDRISANI
LENOX

Lenox is launching a stunning new dinnerware collection in partnership with architect Luca Andrisani. To achieve his tableware vision, Luca turned to Lenox, the number one tabletop brand. The Lenox brand celebrates more than 125 years as the longest-standing American china company founded in 1880. Here is a sneak peek of the new dinnerware collection—Lenox is launching with international architect Luca Andrisani.

With Lenox's expertise, the Blue Azzuro collection, which is the new Interior Design Best of Year Winner, blends Luca's artistic designs with chip-resistant technology.

Blue Azzuro dinnerware features the layering of shades of blue with contrasting geometrics that are offset with the crisp white canvas of the durable porcelain body. Varying brush strokes in hues of blue grace the modern coupe shapes. Touches of microwave-safe gold are interspersed giving the collection an innovative edge.

Within the architecturally inspired collection there is an array of chip-resistant accessories for any need within the kitchen—from multiple sized serving bowls and platters to tea accessories and tabletop canisters.

Since founding his practice, Luca Andrisani has designed, managed, and detailed international architecture and interior design projects for the world's leading retail, commercial, and residential clientele. With a presence in New York, Luca has expanded upon his experience working with the world's leading architectural firms. He brings his distinct international perspective based on collaborative material, innovation, and research to each project.

Luca completed his Masters in Architecture at the Royal Institute in Sweden and graduated with Honors from the famed La Sapienza University in Rome. His firm has won numerous awards including the International Design Award and Interior Design Merit Award. Luca has also been named an Emerging Architect by Architectural Record.

The Luca Andrisani by Lenox collection is a fresh new bold take on casual entertaining and a perfect marriage of design and function.

"I have a passion for optical art and geometry and I've explored this passion in the collection"
